

Iodium

Increases efficiently and safely the concentration of iodine.

Iodine is essential for the development of corals and reef-building invertebrates and is one of the important elements required for their growth. Free of phosphate, silicate, and nitrates. Formulated by a German biologist.

User Instructions :

1 dosing cup (15 ml) per 200 liter once a week or in dense populated aquarium every 3 days or as required to maintain the iodine concentration at a range of ± 0.06 mg. Distribute the Iodium near the outlet of the pump. Shake well before use.

Safety measures :

Keep out of reach of children.

In case of direct contact with skin or clothes, rinse immediately.
